

Wildlife Health Victoria

Surveillance Discovery! What is happening?
What are the wildlife health patterns? Changing?
Why?
August 2021

We investigate sick & dead wildlife from free ranging populations in Victoria to understand baseline wildlife health patterns, detect changes and factors involved, & understand wildlife reservoirs of zoonotic diseases. The health of wildlife, ecosystems, domestic animals & people are connected (One Health).

We acknowledge the Elders, Communities, and Traditional Owners past, present and emerging of this land and our pay respect to them.

Please contact us to report wildlife mortalities and morbidities from free ranging populations of endemic mammals, birds, reptiles and amphibians in Victoria.

Pam Whiteley BVSc MS MANZCVS (Australian Wildlife Medicine & Epidemiology) BTeach ACCM CF

**Wildlife Health Victoria: Surveillance Coordinator
Melbourne Veterinary School The Uni of Melbourne
250 Princes Highway, Werribee.**

pamw@unimelb.edu.au 0400119301

Pam is keen to talk with regional community groups.

You can also contact Victorian DELWP <https://www.wildlife.vic.gov.au/> and about sick, injured, orphaned wildlife etc.

If you find mass mortality of sick or dead wildlife please contact the Emergency Animal Disease Watch Hotline on 1800 675 888

<https://fvas.unimelb.edu.au/research/groups/wildlife-health-victoria-surveillance> Wildlife Health Victoria: Surveillance website

**Please report dead and sick wildlife to Pam Whiteley 0400119301
pamw@unimelb.edu.au. If Pam is not available 03 97312000 Pathology**
After contacting Pam dead wildlife may be shipped overnight to the Melbourne Vet School, The University of Melbourne, 250 Princes Highway, Werribee, 3030.
Donations to this project are tax deductible. Please contact Pam.
We are very grateful to the H&A Bruce Bequest, Birdlife Australia, MA Ingram Trust, Youngman Trust, Vizard Foundation, Hermon Slade Foundation and Donors for your support!
